Candidate Task AngularJS Developer

Thank you for applying for the Frontend Developer vacancy at Quandoo. In efforts to have a general understanding of your level of expertise, we would like to proceed with an assessment that will give you the chance to show Quandoo that you are a battle proven Engineer!

The Task: Implement an AutoCompletion component in AngularJS from scratch. The goal is to have a single HTML page including a Search Input field which is spiced up with your AutoCompletion. The Search itself may target any public search API available on the Internet (e.g. Google, Github, Twitter,...) or simple mock data. A result view is not required, it's only about the AutoCompletion.

Considering that you will have to create an AngularJS module from scratch, you are free to decide which and how many technologies to use (Frontend frameworks, JavaScript libraries, Task Manager, etc.). Please provide a concise explanation/reasoning for your choice of technologies.

The goal is to not spend more than 8 hours for this task. If you can't finish your work within that time frame, no problem, hand in what you have completed after the 8hrs mark. If you're done before the deadline, even better.

Acceptance criterias

- Webpage written in HTML, CSS and AngularJS
- Search AutoCompletion component written in AngularJS
- Detailed code documentation

Bonus Points for

- keyboard arrow controls
- JS Unit testing
- real live data
- publishing your completed task on GitHub

Happy Coding!

Send us the results of your work to:
